CC   outcome, and the second class of patients has a second clinical outcome.
CC   The method, system, and array are useful for prognosing and treating
CC   solid tumours. This sequence represents a solid tumour prognosis gene of
CC   the invention. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT Gene vaccine containing cancer antigen genes ligated to ubiquitin genes
PT or cytokine genes for prevention and treatment of cancer.
XX
PS Disclosure; SEQ ID NO 39; 266pp; Japanese.
XX
CC The invention relates to a novel genetic vaccine containing the ubiquitin
CC gene together with a gene encoding an antigenic protein containing a T-
CC cell target sequence. The vaccine of the invention may be useful for
CC prevention and treatment of cancers including melanoma, sarcoma, lymphoma
CC (Hodgkins or non-Hodgkins), leukaemia, neuroblastoma, myeloma and cancer
CC of the lung, stomach, skin, thyroid, ovary, prostate, womb, pancreas,
CC colon, bladder, breast, oesophagus, kidney or brain. The current sequence
CC is that of a human genetic vaccine/ubiquitin (Ub)-related DNA of the
CC invention.

PT Immunogenic portion of an ovarian carcinoma protein and the nucleic acid
PT encoding it, useful for the diagnosis, prevention and treatment of
PT cancer, preferably ovarian cancer.
XX
PS Claim 18; Fig 15; 299pp; English.
XX
CC The present invention describes an isolated polypeptide comprising an
CC immunogenic portion of an ovarian carcinoma protein (or its variants).
CC Ovarian carcinoma proteins, and polynucleotides encoding them, have
CC cytostatic activity and can be used in gene therapy and vaccines. Ovarian
CC carcinoma polypeptides, nucleic acids, antibodies and vaccines are useful
CC for the prevention, diagnosis and treatment of cancer, preferably ovarian
CC cancer. AAA69691 to AAA70077 and AAB12552 to AAB12557 represent human
CC ovarian carcinoma polynucleotides and proteins used in the
CC exemplification of the present invention

PT New isolated O772P polypeptides and polynucleotides, useful in gene
PT therapy, particularly for treating or diagnosing cancer, e.g. ovarian
PT cancer.
XX
PS Example 1; Fig 15; 371pp; English.
XX
CC The invention relates to an isolated O772P polypeptide, which has the
CC structure fully defined in the specification. The composition containing
CC the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells
CC or antigen presenting cells are useful for stimulating an immune response
CC and treating ovarian cancer. Detecting the presence of the
CC polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian
CC carcinoma cDNAs and protein cDNAs were identified using microarray
CC technology. The present sequence represents a human ovarian carcinoma
CC antigen polynucleotide.

PT Oncogenic nucleic acids useful for the prevention, diagnosis and
PT treatment of breast cancer.
XX
PS Example 1; SEQ ID NO 95; 399pp; English.
XX
CC The invention describes nucleic acids (I) and the polypeptides (II) they
CC encode. The nucleic acids (I) may be used for preventing, diagnosing and
CC treating diseases related to their aberrant expression i.e. breast
CC cancers. For example, (I) and (II) may be used to treat disorders
CC associated with decreased expression by rectifying mutations or deletions
CC in a patient's genome that affect the activity of (II) by expressing
CC inactive proteins or to supplement the patients own production of (II).
CC Additionally, (I) may be used to produce (II), by inserting (I) into a
CC host cell and culturing the cell to express the protein (II). (I) And its
CC complementary sequences may also be used as DNA probes in diagnostic
CC assays to detect and quantitate the presence of similar nucleic acids in
CC samples, and therefore which patients may be in need of restorative

```
CC   therapy. The host cell may also be used as antigens in the production of
CC   antibodies against (II) and in assays to identify modulators of (II)'s
CC   expression and activity. The anti-(II) antibodies, agonists and
CC   antagonists may be used to regulate expression and activity and as
CC   diagnostic agents for detecting the presence of (II) in samples (e.g. by
CC   immunoassay). This sequence represents a polynucleotide encoding a
CC   secreted ovarian carcinoma antigen.

PT   New isolated O8E or O772P polypeptides, useful for diagnosing,
PT   preventing, treating and monitoring cancer, e.g. ovarian cancer,
PT   stimulating the immune response in patient.
XX
PS   Example 1; SEQ ID NO 95; 290pp; English.
XX
CC   The invention relates to human ovarian carcinoma polypeptides, designated
CC   O8E or O772P, and the polynucleotides encoding them. The invention also
CC   relates to methods for inhibiting the development of cancer, e.g. ovarian
CC   cancer in a patient, methods for stimulating and/or expanding T cells and
CC   methods for identifying secreted tumour antigens. The polypeptides,
CC   compositions, antibodies to the polypeptides and methods are useful for
CC   diagnosing, preventing, treating and monitoring cancer, e.g. ovarian
CC   cancer. The composition is particularly useful for stimulating an immune
CC   response in patient. This sequence represents a human ovarian carcinoma
CC   polynucleotide of the invention.

XX
CC The invention relates to an isolated polynucleotide comprising a sequence
CC of, a sequence hybridizing under highly stringent conditions to, or
CC having at least 75, or 90% identity to a 849 or 1399 bp, fully defined in
CC the specification, its complement or degenerate variants, or a sequence
CC of at least 20 contiguous residues of the 849 or 1399 bp sequence. The
CC polynucleotides and polypeptides are useful for diagnosing, preventing
CC and treating diseases, such as ovarian cancer, and for eliciting humoral
CC and/or cellular immune response. This sequence corresponds to an ovarian
CC carcinoma antigen cDNA of the invention.

PT New isolated O772P polypeptides and polynucleotides, useful in gene
PT therapy, particularly for treating or diagnosing cancer, e.g. ovarian
PT cancer.
XX
PS Example 1; Fig 15; 371pp; English.
XX
CC The invention relates to an isolated O772P polypeptide, which has the
CC structure fully defined in the specification. The composition containing
CC the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells
CC or antigen presenting cells are useful for stimulating an immune response
CC and treating ovarian cancer. Detecting the presence of the
CC polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian
CC carcinoma cDNAs and protein cDNAs were identified using microarray
CC technology. The present sequence represents a human ovarian carcinoma
CC antigen polynucleotide.

PT   Oncogenic nucleic acids useful for the prevention, diagnosis and
PT   treatment of breast cancer.
XX
PS   Example 1; SEQ ID NO 100; 399pp; English.
XX
CC   The invention describes nucleic acids (I) and the polypeptides (II) they
CC   encode. The nucleic acids (I) may be used for preventing, diagnosing and
CC   treating diseases related to their aberrant expression i.e. breast
CC   cancers. For example, (I) and (II) may be used to treat disorders
CC   associated with decreased expression by rectifying mutations or deletions
CC   in a patient's genome that affect the activity of (II) by expressing
CC   inactive proteins or to supplement the patients own production of (II).
CC   Additionally, (I) may be used to produce (II), by inserting (I) into a
CC   host cell and culturing the cell to express the protein (II). (I) And its
CC   complementary sequences may also be used as DNA probes in diagnostic
CC   assays to detect and quantitate the presence of similar nucleic acids in
CC   samples, and therefore which patients may be in need of restorative
CC   therapy. The host cell may also be used as antigens in the production of
CC   antibodies against (II) and in assays to identify modulators of (II)'s
CC   expression and activity. The anti-(II) antibodies, agonists and
CC   antagonists may be used to regulate expression and activity and as
CC   diagnostic agents for detecting the presence of (II) in samples (e.g. by
CC   immunoassay). This sequence represents a polynucleotide encoding a
CC   secreted ovarian carcinoma antigen.

PT New ovarian carcinoma polynucleotides, preferably cDNAs, useful for
PT diagnosing, preventing and treating diseases, such as ovarian cancer, and
PT for eliciting humoral and/or cellular immune response.
XX
PS Example 1; SEQ ID NO 100; 398pp; English.
XX
CC The invention relates to an isolated polynucleotide comprising a sequence
CC of, a sequence hybridizing under highly stringent conditions to, or
CC having at least 75, or 90% identity to a 849 or 1399 bp, fully defined in
CC the specification, its complement or degenerate variants, or a sequence
CC of at least 20 contiguous residues of the 849 or 1399 bp sequence. The
CC polynucleotides and polypeptides are useful for diagnosing, preventing
CC and treating diseases, such as ovarian cancer, and for eliciting humoral
CC and/or cellular immune response. This sequence corresponds to an ovarian
CC carcinoma antigen cDNA of the invention.

XX
CC The present invention relates to a method for destabilising a target
CC protein in a cell. The method comprises a linker moiety which operatively
CC couples a target protein (a reporter moiety) to a linear multimerised
CC destabilising domain, which is non-cleavable by a -NH-ubiquitin protein
CC endoproteases. The method is useful for detecting an activity such as
CC protease, protein kinase or phosphoprotein phosphatase activity and is
CC also useful for identifying modulators of these activities. The method is
CC also useful for developing novel assays for a wide range of post-
CC translational activities, such as proteolysis, phosphorylation,
CC dephosphorylation, glycosylation, methylation, sulfation, prenylation,
CC disulfide bond formation and ADP-ribosylation within cells. The
CC recombinant DNA molecule of the invention is useful for creating
CC transgenic animals useful as disease models and transgenic plants with
CC improved disease resistance or other favourable traits. The present
CC sequence is a pcDNA3-1XUb-GFP construct comprising mutant multimerised
CC human ubiquitin destabilisation domain-Aequorea victoria green
CC fluorescent protein (GFP) fusion protein. (Updated on 11-SEP-2003 to
CC standardise OS field)

XX
CC   The present invention relates to a method for destabilising a target
CC   protein in a cell. The method comprises a linker moiety which operatively
CC   couples a target protein (a reporter moiety) to a linear multimerised
CC   destabilising domain, which is non-cleavable by a -NH-ubiquitin protein
CC   endoproteases. The method is useful for detecting an activity such as
CC   protease, protein kinase or phosphoprotein phosphatase activity and is
CC   also useful for identifying modulators of these activities. The method is
CC   also useful for developing novel assays for a wide range of post-
CC   translational activities, such as proteolysis, phosphorylation,
CC   dephosphorylation, glycosylation, methylation, sulfation, prenylation,
CC   disulfide bond formation and ADP-ribosylation within cells. The
CC   recombinant DNA molecule of the invention is useful for creating
CC   transgenic animals useful as disease models and transgenic plants with
CC   improved disease resistance or other favourable traits. The present
CC   sequence is a pcDNA3-1XUb-DEVA-Bla construct comprising mutant
CC   multimerised human ubiquitin destabilisation domain-Escherichia coli beta
CC   -lactamase fusion protein linked by a linker containing a DEVA site that
CC   should not serve as a cleavage site for caspase-3-like proteases.

PT Destabilizing proteins in living cells, by coupling a target protein to
PT linear multimerized destabilization domain non-cleavable by -NH-ubiquitin
PT protein endoproteases, comprising two copies of the domain.
XX
PS Example 10; Page 147-148; 171pp; English.
XX
CC The present invention relates to a method for destabilising a target
CC protein in a cell. The method comprises a linker moiety which operatively
CC couples a target protein (a reporter moiety) to a linear multimerised
CC destabilising domain, which is non-cleavable by a -NH-ubiquitin protein
CC endoproteases. The method is useful for detecting an activity such as
CC protease, protein kinase or phosphoprotein phosphatase activity and is
CC also useful for identifying modulators of these activities. The method is
CC also useful for developing novel assays for a wide range of post-
CC translational activities, such as proteolysis, phosphorylation,
CC dephosphorylation, glycosylation, methylation, sulfation, prenylation,
CC disulfide bond formation and ADP-ribosylation within cells. The
CC recombinant DNA molecule of the invention is useful for creating
CC transgenic animals useful as disease models and transgenic plants with
CC improved disease resistance or other favourable traits. The present
CC sequence is a pcDNA3-4XUb-DEVD-Bla construct comprising mutant
CC multimerised human ubiquitin destabilisation domains-Escherichia coli
CC beta-lactamase fusion protein linked by a linker containing a caspase-3
CC cleavage site. (Updated on 11-SEP-2003 to standardise OS field)

XX
CC The present invention relates to a method for destabilising a target
CC protein in a cell. The method comprises a linker moiety which operatively
CC couples a target protein (a reporter moiety) to a linear multimerised
CC destabilising domain, which is non-cleavable by a -NH-ubiquitin protein
CC endoproteases. The method is useful for detecting an activity such as
CC protease, protein kinase or phosphoprotein phosphatase activity and is
CC also useful for identifying modulators of these activities. The method is
CC also useful for developing novel assays for a wide range of post-
CC translational activities, such as proteolysis, phosphorylation,
CC dephosphorylation, glycosylation, methylation, sulfation, prenylation,
CC disulfide bond formation and ADP-ribosylation within cells. The
CC recombinant DNA molecule of the invention is useful for creating
CC transgenic animals useful as disease models and transgenic plants with
CC improved disease resistance or other favourable traits. The present
CC sequence is a pcDNA3-3XUb-Bla HRV14 construct comprising mutant
CC multimerised human ubiquitin destabilisation domains-Escherichia coli
CC beta-lactamase-human rhinovirus 14 2A protease fusion protein. (Updated
CC on 11-SEP-2003 to standardise OS field)

PT New polynucleotides encoding ovarian tumor proteins, useful for treating
PT ovarian cancer, and as probes, primers, and markers of cancer
PT progression.
XX
PS Example 1; Page 276; 378pp; English.
XX
CC The invention comprises compositions used for the therapy and diagnosis
CC of ovarian cancer. The compositions comprise one or more ovarian tumour
CC proteins, their associated polynucleotides, or immunogenic portions of
CC the proteins. The ovarian tumour polynucleotides and polypeptides are
CC useful for stimulating and/or expanding T cells specific for a tumour
CC protein. They are also useful for inhibiting the development of cancer in
CC a patient with an ovarian tumour DNA or protein by incubating isolated T-
CC cells allowing them to proliferate, and administering to the patient. The
CC sequences can be used as markers for cancer, for example, to monitor
CC ovarian cancer progression. Probes and primers are useful in nucleic acid
CC hybridisation, in detecting the presence of complementary sequences in a
CC given sample, for preparing mutant species and for preparing other
CC genetic constructions. Sequences AAS23820-AAS25231 and AAS25328-AAS25549
CC represent human ovarian tumour protein cDNA clones

PT Destabilizing proteins in living cells, by coupling a target protein to
PT linear multimerized destabilization domain non-cleavable by -NH-ubiquitin
PT protein endoproteases, comprising two copies of the domain.
XX
PS Claim 8; Page 112; 171pp; English.
XX
CC The present invention relates to a method for destabilising a target
CC protein in a cell. The method comprises a linker moiety which operatively
CC couples a target protein (a reporter moiety) to a linear multimerised
CC destabilising domain, which is non-cleavable by a -NH-ubiquitin protein
CC endoproteases. The method is useful for detecting an activity such as
CC protease, protein kinase or phosphoprotein phosphatase activity and is
CC also useful for identifying modulators of these activities. The method is
CC also useful for developing novel assays for a wide range of post-
CC translational activities, such as proteolysis, phosphorylation,
CC dephosphorylation, glycosylation, methylation, sulfation, prenylation,
CC disulfide bond formation and ADP-ribosylation within cells. The
CC recombinant DNA molecule of the invention is useful for creating
CC transgenic animals useful as disease models and transgenic plants with
CC improved disease resistance or other favourable traits. The present
CC sequence is a DNA encoding human mutant ubiquitin (G76V) destabilising
CC domain

PT New modified arrestin comprising an arrestin and a ubiquitin moiety or
PT their biologically active fragment, useful for treating a human or a non-
PT human subject suffering from a GPCR-related disease.
XX
PS Claim 9; Fig 10; 90pp; English.
XX
CC The present sequence is the coding sequence for a chimeric polypeptide
CC comprising enhanced green fluorescent protein (EGFP), beta-arrestin 2 and
CC ubiquitin 48. The chimeric polypeptide is a claimed example of modified
CC arrestins of the invention that comprise an arrestin (or biologically
CC active fragment) and ubiquitin (or biologically active fragment) and an
CC optional label. The modified arrestin has an increased affinity for a G-
CC protein coupled receptor (GPCR) such that the arrestin remains associated
CC with the GPCR and traffics with the GPCR into endosomes and hence does
CC not dissociate at or near the plasma membrane. The modified arrestin
CC increases the internalisation of the GPCR. The invention provides the
CC modified arrestins, nucleic acids encoding them, expression vectors and
CC host (mammalian, bacterial, yeast, plant, insect or animal) cells. The
CC modified arrestins are used in a claimed method of screening compounds
CC and sample solutions for a GPCR agonist, antagonist, inverse agonist or
CC desensitization active compound. Claimed methods of treating a human or
CC non-human subject suffering from a GPCR-related disease comprise
CC administering a compound identified by this method or a nucleic acid
CC encoding a modified arrestin.

PT New isolated nucleic acid that is differentially expressed in cancer
PT tissues useful for determining the presence of colon cancer in a cell or
PT tissue type, and in antisense therapy.
XX
PS Claim 1; Fig 1; 796pp; English.
XX
CC ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially
CC expressed in cancer tissues. ABB78993 to ABB79004 represent proteins
CC encoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be
CC used in antisense therapy. An antibody immunoreactive with a polypeptide
CC encoded by (I) is useful for detecting cancer in a patient sample, and
CC for detecting the presence or absence of a polynucleotide encoded by a
CC nucleic acid which hybridises to (I) in a cell. A probe/primer derived
CC from (I) can be used for determining the presence of a nucleic acid which
CC hybridises to (I), and for determining the phenotype of cells in a sample
CC of cells from a patient. (I) is useful for determining the presence of
CC colon cancer in a cell or tissue type, for determining the presence or
CC state of other type of cancer, in antisense therapy, to generate
CC macroarrays on a solid surface, to identify a chromosome on which the
CC corresponding gene resides, and in tissue profiling, forensics, genetic
CC analysis, mapping and diagnostic applications. (I) can be used to raise
CC antibodies, and to screen for peptide analogues and antagonists

PT Single-stranded DNA for identifying gene signatures - isolated from 3'-
PT directed human cDNA library that reflects relative abundance of corresp.
PT mRNA in specific human tissues.
XX
PS Claim 1; Page 350; 2245pp; Japanese.
XX
CC A single-stranded DNA (or its complementary strand or the corresp. double
CC -stranded DNA) which comprises one of the 7837 "GS" sequences given in
CC AAT19001-T26837 and which is able to hybridise to part of human genomic
CC DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were
CC obtained from 3'-directed cDNA libraries prepared from various human
CC tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using
CC poly(T) as the sole primer. Since the 3'- untranslated sequence is unique
CC to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise
CC with specific mRNAs. Each library is constructed so as to reflect
CC accurately the relative abundance of different mRNAs in the particular
CC tissue from which it was derived. The appearance frequency of a given GS
CC in a cDNA library can be determined (esp. using primers and probes
CC derived from the GS sequences) as a means of diagnosing abnormal cell
CC function or for recognising different cell types

CC encompasses polypeptides 90% identical and polynucleotides 95% identical
CC to the sequences of the invention. The invention additionally relates to
CC recombinant vectors and host cells comprising human ovarian antigen
CC polynucleotides, antibodies against human ovarian antigens, and the use
CC of ovarian antigen polynucleotides and polypeptides in diagnosing,
CC treating, prognosing or preventing various ovary and/or breast-related
CC disorders. Such conditions include ovarian cancer and breast cancer, and
CC metastatic tumours of ovarian or breast origin, reproductive system
CC disorders (e.g., infertility, disorders of pregnancy, anovulation,
CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine
CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic
CC shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and
CC vaginitis), immune disorders (e.g., congenital and acquired
CC immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),
CC blood-related disorders (e.g., anaemia), cardiovascular disorders,
CC respiratory disorders, neurological disorders, gastrointestinal disorders
CC and urinary system disorders. Ovarian antigen polypeptides and
CC polynucleotides may also be used in screening for compounds which
CC modulate ovarian antigen expression or activity. The polynucleotides may
CC further be used for gene therapy, chromosome mapping, in the
CC identification of individuals and in forensic analysis, and the
CC polypeptides may be used as food additives or to prepare antibodies
CC useful in disease diagnosis, drug targeting and phenotyping. The present
CC sequence represents cDNA encoding a human ovarian antigen of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New polynucleotides encoding ovarian tumor proteins, useful for treating
PT ovarian cancer, and as probes, primers, and markers of cancer
PT progression.
XX
PS Example 1; Page 298; 378pp; English.
XX
CC The invention comprises compositions used for the therapy and diagnosis
CC of ovarian cancer. The compositions comprise one or more ovarian tumour
CC proteins, their associated polynucleotides, or immunogenic portions of
CC the proteins. The ovarian tumour polynucleotides and polypeptides are
CC useful for stimulating and/or expanding T cells specific for a tumour
CC protein. They are also useful for inhibiting the development of cancer in
CC a patient with an ovarian tumour DNA or protein by incubating isolated T-
CC cells allowing them to proliferate, and administering to the patient. The
CC sequences can be used as markers for cancer, for example, to monitor
CC ovarian cancer progression. Probes and primers are useful in nucleic acid
CC hybridisation, in detecting the presence of complementary sequences in a
CC given sample, for preparing mutant species and for preparing other
CC genetic constructions. Sequences AAS23820-AAS25231 and AAS25328-AAS25549
CC represent human ovarian tumour protein cDNA clones

PT Determining open reading frames of genome of an organism e.g. a human
PT suffering from cancer involves use of single oligonucleotide primer at
PT low stringency for preparing single-stranded cDNA from mRNA of
PT individual.
XX
PS Example 9; Page 108; 959pp; English.
XX
CC The invention describes a method of determining open reading frames in
CC the genome of organism, comprising contacting mRNA from cell of organism
CC with a single oligonucleotide primer (I) at low stringency, preparing
CC single-stranded cDNA by reverse transcribing mRNA with (I), amplifying
CC cDNA , sequencing the product, and repeating the contacting, preparing
CC and amplifying steps with different primers and sequencing resulting
CC nucleic acids. The method is useful for: determining that a known
CC nucleotide sequence from a genome of an organism corresponds to a
CC nucleotide sequence of an open reading frame; for preparing a contig,
CC nucleic acid molecule from a genome of an organism; and for sequencing
CC all or part of a genome of an organism. mRNA is obtained from mammalian
CC or human cell which is associated with a pathological condition e.g. a
CC colon cancer or breast cancer cell. The method is useful for analyses of
CC populations of subjects and can be used to carry out genetic analyses of
CC large or small populations. further, it can be used to study living
CC systems to determine if, e.g. there have been genetic shifts which render
CC an individual or population more or less likely to be afflicted with
CC diseases such as cancer, to determine antibiotic resistance or non-
CC tolerance, and so forth. The method can also be used in the study of
CC congenital diseases, and the risk of affliction to a foetus, as well as
CC the study of whether the conditions are likely to be passed to offspring
CC through ova or sperm. The analyses for pathological conditions can be
CC carried out in all animals, plants, birds, fish, etc. Using this method,
CC in the area of agriculture, for example the genomes of food crops can be
CC studied to determine if resistance genes are present, defects in plant
CC genomes can also be studied in this way. Similarly, the method permits
CC determination of the pathogens which integrate into the genome, such as
CC retroviruses and other integrating viruses such as influenza virus, have
CC undergone shifts or mutations, which may require different approaches to
CC therapy. This method is also applied to eukaryotic pathogens, such as
CC trypanosomes, different types of Plasmodium, etc. The method essentially
CC eliminates sequencing of non-coding portions. This sequence represents a
CC polynucleotide isolated from human colon cancer cell cDNA library

PS Example 11b; SEQ ID NO 67; 229pp; English.
XX
CC The invention relates to novel isolated chordin like homolog (CHL2)
CC nucleic acid sequences. The invention further comprises: a chordin like
CC homolog amino acid sequence; an antibody capable of specifically binding
CC to at least one epitope of the amino acid sequence; an expression vector
CC comprising the nucleic acid sequence and a control element for the
CC expression of the nucleic acid sequence in a suitable host; a host cell
CC transfected by the expression vector; a pharmaceutical composition
CC comprising a carrier and as an active ingredient, the expression vector,
CC nucleic acid sequence, amino acid sequence or antibody; a method for
CC treating a disease; a method for detecting a Chordin like homologue
CC (CHL2) nucleic acid sequence in a biological sample; a method for
CC detecting antibodies in a biological sample; a biomarker for detecting
CC prostate cancer, comprising hCHL2 variant X having a 1515-nt sequence
CC (ADX55906) or its fragment; a primer pair for use in detecting the

CC biomarker; an amplicon obtained through the use of the primer pair; a
CC nucleic acid molecule capable of selectively hybridizing to hCHL2
CC variants IV, V, VI, VII, VIII, IX or X; a biomarker for detecting cancers
CC comprising the sequence of exon 2a (ADX55960); a kit for detecting
CC prostate cancer; a kit for detecting prostate cancer of cells; a method
CC for detecting prostate cancer in cells suspected of being cancerous; a
CC biomarker for detecting prostate cancer; a biomarker for detecting breast
CC or lung cancer; a method for detecting lung or breast cancer in cells
CC suspected of being cancerous; and a method for detecting a CHL2-product
CC in a biological sample. The chordin like homolog proteins, encoding
CC nucleic acids and compositions have osteopathic, gynecological,
CC neuroprotective, antiinflammatory, and cytostatic activities. The chordin
CC like homolog nucleic acid sequence is useful in preparing a composition
CC for diagnosing or treating bone injuries. It is also useful in treating
CC diseases involved with the female reproductive tract, diseases or
CC disorders involved with abnormal sexual differentiation, recurrent
CC miscarriages, tumors of the lung, uterus, breast or prostate, diseases
CC involving sexual hormone abnormalities, cardiovascular disorders,
CC neuronal diseases of the CNS, neurodegenerative diseases and diseases
CC involving non-normal developments of neurons, inflammatory diseases, or
CC diseases of the gut. This polynucleotide sequence represents a human
CC ubiquitin C house-keeping gene PCR amplicon used in comparison to human
CC CHL2 of the invention.

PT New isolated UbcH10 polynucleotides and polypeptides, useful for
PT diagnosing or treating UbcH10-related diseases, e.g. ovarian cancer, lung
PT cancer, Alzheimer's disease, amnesia, allergies, anemia, asthma,
PT atherosclerosis or diabetes.
XX
PS Example 1; SEQ ID NO 33; 165pp; English.
XX
CC The invention describes an isolated polynucleotide comprising fully
CC defined 696-935 base pair sequences (SEQ ID NO. 1-3) given in the
CC specification, and a nucleic acid sequence encoding a UbcH10 polypeptide
CC having at least a portion of an amino acid sequence at least 70%
CC homologous to fully defined 50 amino acid sequence (SEQ ID NO. 7) given
CC in the specification. Also described are: an isolated polynucleotide
CC encoding UbcH10; an antibody or an antibody fragment capable of
CC specifically binding the isolated polypeptide above; an antibody or an
CC antibody fragment capable of specifically binding a UbcH10 polypeptide;
CC an oligonucleotide specifically hybridizable with a nucleic acid sequence
CC encoding a UbcH10 polypeptide including at least a portion of an amino
CC acid sequence at least 70% homologous to SEQ ID NO. 7 or 8, as determined
CC using the BlastP software of the NCBI using default parameters;
CC diagnosing predisposition to, or presence of a UbcH10-related disease in
CC a subject; and a kit for diagnosing UbcH10-related disease or a
CC predisposition to it in a subject, the kit comprising at least one
CC reagent capable of detecting overexpression of the UbcH10 polypeptide
CC above. Also disclosed are: a display library comprising display vehicles
CC displaying at least 6 consecutive amino acids derived from a UbcH10
CC polypeptide; a pharmaceutical composition comprising a UbcH10 polypeptide
CC ; and treating UbcH10-related disease in a subject. The polynucleotides
CC and polypeptides are useful for diagnosing and treating UbcH10-related
CC diseases. Diseases include cancer, e.g. ovarian cancer, lung cancer,
CC colorectal cancer, or oral cancer; neuronal diseases, e.g. Alzheimer's
CC disease, amnesia, bipolar disorder, or depression; and autoimmune
CC disorders, e.g. AIDS, allergies, anemia, asthma, atherosclerosis, contact
CC dermatitis, diabetes, gout, multiple sclerosis, osteoporosis, psoriasis,
CC or ulcerative colitis. This sequence represents an amplicon of human
CC ubiquitin, a house keeping gene used in an assay to measure UbcH10
CC expression.

PT   New isolated polynucleotide encoding Brain Natriuretic Peptide (BNP),
PT   useful for diagnosing or treating cardiac diseases e.g. myocardial
PT   infarct, acute coronary syndrome, angina pectoris, cardiomyopathy, or
PT   myocarditis.
XX
PS   Example 3; SEQ ID NO 38; 127pp; English.
XX
CC   The invention describes an isolated polynucleotide comprising a nucleic
CC   acid sequence selected from HUMNATPEP_PEA 1 _T1, HUMNATPEP_PEA 1 _T2,
CC   HUMNATPEP_PEA 1 _T3, or HUMNATPEP_PEA 1 _T4. Specifically claimed are
CC   polynucleotides encoding Brain Natriuretic Peptide (BNP). The
CC   polynucleotide is selected from HUMNATPEP_PEA 1 _T1, HUMNATPEP_PEA 1 _T2,
CC   HUMNATPEP_PEA 1 _T3, or HUMNATPEP_PEA 1 _T4. The polynucleotides and
CC   polypeptides are useful for the diagnosis or treatment of BNP-related
CC   diseases including cardiac diseases, e.g. myocardial infarct, acute
CC   coronary syndrome, angina pectoris, cardiomyopathy, myocarditis, or
CC   congestive heart failure. This sequence represents a ubiquitin probe used
CC   as a control in the expression analysis of natriuretic peptides B
CC   precursor variants of the invention.

XX
CC The invention describes a nucleic acid sequence comprising any of the 7
CC nucleotide sequences having 29-1404 bp fully defined in the specification
CC (SEQ ID NOS: 1-7). Also described are: an amino acid sequence comprising
CC 65 amino acids fully defined in the specification (SEQ ID NO: 9); an
CC isolated chimeric polypeptide encoding for S71513_P2, comprising a first
CC amino acid sequence being at least 90% homologous to Met-Lys-Val-Ser-Ala-
CC Ala-Leu-Leu-Cys-Leu-Leu-Leu-Ile-Ala-Ala-Thr-Phe-Ile-Pro-Gln-Gly-Leu-Ala-
CC Gln-Pro-Asp-Ala-Ile-Asn-Ala-Pro-Val-Thr-Cys-Cys-Tyr-Asn-Phe-Thr-Asn-Arg-
CC Lys-Ile-Ser-Val-Gln-Arg-Leu-Ala-Ser-Tyr-Arg-Arg-Ile-Thr-Ser-Ser-Lys-Cys-
CC Pro-Lys-Glu-Ala-Val corresponding to amino acids 1-64 of SY02_HUMAN,
CC which also corresponds to amino acids 1-64 of S71513_P2, and a second
CC amino acid sequence comprising a polypeptide having the sequence M
CC corresponding to amino acid 65 of S71513_P2, where the first amino acid
CC sequence and second amino acid sequence are contiguous and in a
CC sequential order; an antibody capable of specifically binding to an
CC epitope of the amino acid sequence mentioned above; a kit for detecting
CC endometriosis, comprising a kit detecting overexpression of the splice
CC variant or a kit comprising the above antibody; methods for detecting,
CC diagnosing or screening for endometriosis; a biomarker capable of
CC detecting endometriosis, comprising the above nucleic acid or amino acid
CC sequences, or their fragments; a method for monitoring disease
CC progression and/or treatment efficacy and/or relapse of endometriosis;
CC and a method of selecting a therapy for endometriosis. The composition
CC and methods are useful for screening, diagnosing or treating
CC endometriosis. These may also be used in monitoring disease progression
CC and the efficacy of treatment for endometriosis. This sequence represents
CC an ubiquitin amplicon associated with the identification of candidate
CC markers for endometriosis.

PT Gene vaccine having nucleic acids encoding ubiquitin and antigen protein

PT of intracellular parasite, useful for treating parasite infections such
PT as malaria, tuberculosis, toxoplasmosis.
XX
PS Disclosure; SEQ ID NO 35; 266pp; Japanese.
XX
CC A gene vaccine (I) comprises nucleic acid sequence encoding ubiquitin,
CC and a nucleic acid sequence encoding the antigen protein of an
CC intracellular parasite containing T-cell target sequence. (I) is useful
CC for preventing or treating the disease resulting from intracellular
CC protozoan parasite infection such as malaria, tuberculosis,
CC toxoplasmosis, trypanosomiasis, AIDS, cytomegalovirus infection,
CC achlamydia disease, infections caused by Rickettsia , leishmaniasis,
CC Ebola hemorrhagic fever, Trypanosoma infections, Chagas disease, Japanese
CC encephalitis, influenza, rubeola and dengue viral infections,
CC poliomyelitis, Herpes virus (alpha) infections, or severe acute
CC respiratory syndrome. This sequence represent a nucleic acid used in the
CC method of the invention.

PT Gene vaccine containing cancer antigen genes ligated to ubiquitin genes
PT or cytokine genes for prevention and treatment of cancer.
XX
PS Disclosure; SEQ ID NO 37; 266pp; Japanese.
XX
CC The invention relates to a novel genetic vaccine containing the ubiquitin
CC gene together with a gene encoding an antigenic protein containing a T-
CC cell target sequence. The vaccine of the invention may be useful for
CC prevention and treatment of cancers including melanoma, sarcoma, lymphoma
CC (Hodgkins or non-Hodgkins), leukaemia, neuroblastoma, myeloma and cancer
CC of the lung, stomach, skin, thyroid, ovary, prostate, womb, pancreas,
CC colon, bladder, breast, oesophagus, kidney or brain. The current sequence
CC is that of a human genetic vaccine/ubiquitin (Ub)-related DNA of the
CC invention.

PT   Composition containing one or more DNA molecules encoding fragments of a
PT   Mucin 1 (MUC-1) protein overexpressed in tumor cells, useful in anti-
PT   tumor therapy.
XX
PS   Claim 17; Fig 6; 56pp; English.
XX
CC   The present sequence is a DNA termed UBILacI that encodes a fusion
CC   protein containing ubiquitin from MCF7 tumour cell line and a partial
CC   sequence of E. coli beta-galactosidase (LacI portion). This sequence is
CC   fused to the 5' terminus of DNA molecules encoding fragments of human
CC   Mucin 1 (MUC-1), an antigenic protein which is overexpressed in tumour
CC   cells. The DNA molecules encoding MUC-1 fragments are cloned into pMRS30
CC   expression vector and used in pharmaceutical compositions e.g. vaccine
CC   for inducing an antigen-specific anti-tumour immune response.
CC   Compositions containing these DNA molecules are useful in anti-tumour
CC   therapy of patients affected with tumours characterised by high MUC-1
CC   expression. (Updated on 15-SEP-2003 to standardise OS field)

CC   The invention relates to novel genes (AAH68727-AAH73383) associated with
CC   cervical cancer with cytostatic activity. The nucleic acids and encoded
CC   polypeptides are useful: to assess if a patient is afflicted with
CC   cervical cancer or has a pre-malignant condition; to monitor the
CC   progression of cervical cancer or a premalignant condition in a patient;
CC   and to select and/or assess the efficacy of a compound or therapy for
CC   inhibiting cervical cancer in a patient. The nucleic acids may also be
CC   useful for gene therapy

PT   Immunogenic portion of an ovarian carcinoma protein and the nucleic acid
PT   encoding it, useful for the diagnosis, prevention and treatment of
PT   cancer, preferably ovarian cancer.
XX
PS   Claim 18; Fig 15; 299pp; English.
XX
CC   The present invention describes an isolated polypeptide comprising an
CC   immunogenic portion of an ovarian carcinoma protein (or its variants).
CC   Ovarian carcinoma proteins, and polynucleotides encoding them, have
CC   cytostatic activity and can be used in gene therapy and vaccines. Ovarian
CC   carcinoma polypeptides, nucleic acids, antibodies and vaccines are useful
CC   for the prevention, diagnosis and treatment of cancer, preferably ovarian
CC   cancer. AAA69691 to AAA70077 and AAB12552 to AAB12557 represent human
CC   ovarian carcinoma polynucleotides and proteins used in the
CC   exemplification of the present invention

PT   New isolated O772P polypeptides and polynucleotides, useful in gene
PT   therapy, particularly for treating or diagnosing cancer, e.g. ovarian
PT   cancer.
XX
PS   Example 1; Fig 15; 371pp; English.
XX
CC   The invention relates to an isolated O772P polypeptide, which has the
CC   structure fully defined in the specification. The composition containing
CC   the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells
CC   or antigen presenting cells are useful for stimulating an immune response
CC   and treating ovarian cancer. Detecting the presence of the
CC   polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian
CC   carcinoma cDNAs and protein cDNAs were identified using microarray
CC   technology. The present sequence represents a human ovarian carcinoma
CC   antigen polynucleotide.

PT   Oncogenic nucleic acids useful for the prevention, diagnosis and
PT   treatment of breast cancer.
XX
PS   Example 1; SEQ ID NO 99; 399pp; English.
XX
CC   The invention describes nucleic acids (I) and the polypeptides (II) they
CC   encode. The nucleic acids (I) may be used for preventing, diagnosing and
CC   treating diseases related to their aberrant expression i.e. breast
CC   cancers. For example, (I) and (II) may be used to treat disorders
CC   associated with decreased expression by rectifying mutations or deletions
CC   in a patient's genome that affect the activity of (II) by expressing
CC   inactive proteins or to supplement the patients own production of (II).
CC   Additionally, (I) may be used to produce (II), by inserting (I) into a
CC   host cell and culturing the cell to express the protein (II). (I) And its
CC   complementary sequences may also be used as DNA probes in diagnostic
CC   assays to detect and quantitate the presence of similar nucleic acids in
CC   samples, and therefore which patients may be in need of restorative
CC   therapy. The host cell may also be used as antigens in the production of
CC   antibodies against (II) and in assays to identify modulators of (II)'s
CC   expression and activity. The anti-(II) antibodies, agonists and
CC   antagonists may be used to regulate expression and activity and as
CC   diagnostic agents for detecting the presence of (II) in samples (e.g. by
CC   immunoassay). This sequence represents a polynucleotide encoding a
CC   secreted ovarian carcinoma antigen.

PT New mRNA indicative of T cell activation and functional status, useful
PT for diagnosis and therapy e.g. of autoimmunity or transplant rejection.
XX
PS Claim 1; Page 52; 94pp; German.
XX
CC This sequence represents a novel messenger RNA, (mRNA), (I), for use as
CC indicator of the activation and functional status of T cells, that have
CC increased or reduced expression, and are present at higher or lower
CC concentration, in activated T cells, relative to normal or resting cells,
CC where (I) hybridizes to any of 334 sequences, reproduced, or their
CC derivatives, complements or fragments. The products of the invention have
CC immunosuppressive, immunostimulant, antiinflammatory and cytostatic
CC activity and can be used for gene therapy. The polynucleotides of the
CC invention are used: (i) as reagent for detecting activation/functional
CC status of T cells, for diagnosis, therapy, modulation or control of the
CC status, in cases of (auto)immunity (against microorganisms, vaccines or
CC allergens); transplant rejection; immunologically-related inflammation;
CC immunosuppression; immune deficiency; guest versus host disease, and
CC malignant diseases of the immune system; (ii) for identifying agents,
CC potential pharmaceuticals, that bind to (II) or derived polypeptides
CC (III); (iii) to prepare kits for measuring gene expression profiles in
CC isolated immune, especially T, cells; (iv) to raise antibodies (Ab)
CC directed against (III); and (v) to prepare binding molecules (IV)
CC specific for (II). Ab and (IV) are also useful for detecting and
CC modulating the activation and functional status of T cells. AAI68865-
CC AAI69198 represent the activated T-cell derived polynucleotide fragments
CC described in the method of the invention

PT   New polynucleotide sequences obtained from various cDNA libraries, useful
PT   as hybridization probes, as oligomers for PCR, for chromosome and gene
PT   mapping, in the recombinant production of protein, or in generating
PT   antisense DNA or RNA.
XX
PS   Claim 1; SEQ ID NO 28329; 44pp; English.
XX
CC   The invention relates to an isolated polynucleotide comprising any one of
CC   38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC   determined by the technique of SBH (sequencing by hybridisation). Also
CC   included is a purified polypeptide comprising a sequence corresponding to
CC   a reading frame of the novel polynucleotide. The nucleic acid sequences
CC   are useful in diagnostics as expressed sequence tags (EST) for
CC   identifying expressed genes or for physical mapping of the human genome,
CC   in forensics, in assessing biodiversities, or in identifying mutations
CC   responsible for genetic disorders and other traits. The nucleotide
CC   sequences are also useful as hybridisation probes, as oligomers for PCR,
CC   for chromosome and gene mapping, in the recombinant production of
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030073623

PT   Novel human immunomodulatory poly:peptide(s) - have homology to the yeast
PT   RAD50 or Drosophila Septin-2 proteins.
XX
PS   Disclosure; Page 127; 155pp; English.
XX
CC   The present sequence represents a nucleic acid sequence identified in the
CC   course of the invention, and 90% homologous to a human ubiquitin gene.
CC   The specification also describes sequences encoding human homologues of
CC   the yeast RAD50, the Drosophila Septin-2 and Acyl-CoA synthetase. The
CC   proteins have immunomodulatory activity. The nucleic acids and proteins
CC   can be used to identify activated T-cells in a sample population. They
CC   can also be used to isolate and identify sequences encoding other
CC   proteins or other compounds having immunomodulatory activity

PT New isolated nucleic acid that is differentially expressed in cancer
PT tissues useful for determining the presence of colon cancer in a cell or
PT tissue type, and in antisense therapy.
XX
PS Claim 1; Fig 1; 796pp; English.
XX
CC ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially
CC expressed in cancer tissues. ABB78993 to ABB79004 represent proteins
CC encoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be
CC used in antisense therapy. An antibody immunoreactive with a polypeptide
CC encoded by (I) is useful for detecting cancer in a patient sample, and
CC for detecting the presence or absence of a polynucleotide encoded by a
CC nucleic acid which hybridises to (I) in a cell. A probe/primer derived
CC from (I) can be used for determining the presence of a nucleic acid which
CC hybridises to (I), and for determining the phenotype of cells in a sample
CC of cells from a patient. (I) is useful for determining the presence of
CC colon cancer in a cell or tissue type, for determining the presence or
CC state of other type of cancer, in antisense therapy, to generate
CC macroarrays on a solid surface, to identify a chromosome on which the
CC corresponding gene resides, and in tissue profiling, forensics, genetic
CC analysis, mapping and diagnostic applications. (I) can be used to raise
CC antibodies, and to screen for peptide analogues and antagonists

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Direct Submission
JOURNAL Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
COMMENT 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned

into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF018BE08QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:31260725.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF016CG06QP1&c=6328.r.

Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.
This sequence belongs to sequence cluster 6328.r
For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CS0DG007CB12QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:31070867.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DN005DG09QP1&c=6328.r.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF008AB04QP1&c=6328.r.

/note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV;
RNA obtained from human embryonic stem cells isolated from
the inner cell mass of blastocyst stage embryos and
differentiated to an early neural progenitor cell type.
Cell line id and NIH Registry designation is BG01.
Positive for Nestin and Musashi expression. Passage number
18. cDNA primed using oligo-dT primer:
5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
the EcoRV/NotI sites of pExpress-1. This primary library
is non-normalized (normalized primary library is
NIH_MGC_259). It was constructed by Express Genomics
(Frederick, MD). Sequence ends have been trimmed to
exclude vector and regions below Phred quality 16. Note:
this is a Mammalian Gene Collection library."

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DG006AC03QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:30541755.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF008DA12QP1&c=6328.r.

                     /note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV;
                     RNA obtained from human embryonic stem cells isolated from
                     the inner cell mass of blastocyst stage embryos and
                     differentiated to an early neural progenitor cell type.
                     Cell line id and NIH Registry designation is BG01.
                     Positive for Nestin and Musashi expression. Passage number
                     18. cDNA primed using oligo-dT primer:
                     5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
                     the EcoRV/NotI sites of pExpress-1. This primary library
                     is non-normalized (normalized primary library is
                     NIH_MGC_259). It was constructed by Express Genomics
                     (Frederick, MD). Sequence ends have been trimmed to
                     exclude vector and regions below Phred quality 16. Note:
                     this is a Mammalian Gene Collection library."

                      RNA obtained from human embryonic stem cells isolated from
                      the inner cell mass of blastocyst stage embryos and
                      differentiated to an early neural progenitor cell type.
                      Cell line id and NIH Registry designation is BG01.
                      Positive for Nestin and Musashi expression. Passage number
                      18. cDNA primed using oligo-dT primer:
```

5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into the EcoRV/NotI sites of pExpress-1. This primary library is non-normalized (normalized primary library is NIH_MGC_259). It was constructed by Express Genomics (Frederick, MD). Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Note: this is a Mammalian Gene Collection library."

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 15, 2001 this sequence version replaced gi:30545869.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DE003AA11QP1&c=6328.r.

            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

                     /note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV;
                     RNA obtained from human embryonic stem cells isolated from
                     the inner cell mass of blastocyst stage embryos and
                     differentiated to an early neural progenitor cell type.
                     Cell line id and NIH Registry designation is BG01.
                     Positive for Nestin and Musashi expression. Passage number
                     18. cDNA primed using oligo-dT primer:
                     5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
                     the EcoRV/NotI sites of pExpress-1. This primary library
                     is non-normalized (normalized primary library is
                     NIH_MGC_259). It was constructed by Express Genomics
                     (Frederick, MD). Sequence ends have been trimmed to
                     exclude vector and regions below Phred quality 16. Note:
                     this is a Mammalian Gene Collection library."

/note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV; RNA obtained from human embryonic stem cells isolated from the inner cell mass of blastocyst stage embryos and differentiated to an early endodermal cell type. Cell line id and NIH Registry designation is BG01. Positive for GATA4, MixL1, Msx1, HNF4alpha expression; negative for AFP expression. Passage number 40. cDNA primed using oligo-dT primer: 5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into the EcoRV/NotI sites of pExpress-1. This primary library is non-normalized (normalized primary library is NIH_MGC_259). It was constructed by Express Genomics (Frederick, MD). Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA. Note: this is a Mammalian Gene Collection library."

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 6328.r
For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CS0DK009CC01QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:30542878.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF013DC11QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:30542509.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF011BD07QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:30542812.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF013CG12QP1&c=6328.r.

/clone_lib="NIH_MGC_258"
/note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV; RNA obtained from human embryonic stem cells isolated from the inner cell mass of blastocyst stage embryos and differentiated to an early endodermal cell type. Cell line id and NIH Registry designation is BG01. Positive for GATA4, MixL1, Msx1, HNF4alpha expression; negative for AFP expression. Passage number 40. cDNA primed using oligo-dT primer: 5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into the EcoRV/NotI sites of pExpress-1. This primary library is non-normalized (normalized primary library is NIH_MGC_259). It was constructed by Express Genomics (Frederick, MD). Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA. Note: this is a Mammalian Gene Collection library."

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 15, 2001 this sequence version replaced gi:31284595.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DG006CC02QP1&c=6328.r.

                     /note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV;
                     RNA obtained from human embryonic stem cells isolated from
                     the inner cell mass of blastocyst stage embryos and
                     differentiated to an early neural progenitor cell type.
                     Cell line id and NIH Registry designation is BG01.
                     Positive for Nestin and Musashi expression. Passage number
                     18. cDNA primed using oligo-dT primer:
                     5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
                     the EcoRV/NotI sites of pExpress-1. This primary library
                     is non-normalized (normalized primary library is
                     NIH_MGC_259). It was constructed by Express Genomics
                     (Frederick, MD). Sequence ends have been trimmed to
                     exclude vector and regions below Phred quality 16. Note:
                     this is a Mammalian Gene Collection library."

                     /note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV;
                     RNA obtained from human embryonic stem cells isolated from
                     the inner cell mass of blastocyst stage embryos and
                     differentiated to an early neural progenitor cell type.
                     Cell line id and NIH Registry designation is BG01.
                     Positive for Nestin and Musashi expression. Passage number
                     18. cDNA primed using oligo-dT primer:
                     5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
                     the EcoRV/NotI sites of pExpress-1. This primary library
                     is non-normalized (normalized primary library is
                     NIH_MGC_259). It was constructed by Express Genomics
                     (Frederick, MD). Sequence ends have been trimmed to
                     exclude vector and regions below Phred quality 16. Note:
                     this is a Mammalian Gene Collection library."

                     Positive for Nestin and Musashi expression. Passage number
                     18. cDNA primed using oligo-dT primer:
                     5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
                     the EcoRV/NotI sites of pExpress-1. This primary library
                     is non-normalized (normalized primary library is
                     NIH_MGC_259). It was constructed by Express Genomics
                     (Frederick, MD). Sequence ends have been trimmed to
                     exclude vector and regions below Phred quality 16. Note:
                     this is a Mammalian Gene Collection library."

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 6328.r
For more information about this cluster, see
http://www.genoscope.cns.fr/cdna?s=CS0DI037DB08QP1&c=6328.r.

/note="Organ: Lung; Vector: pYX-Asc; Site_1: EcoR I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is GATAAGGCCA. Tissue was provided by Mary Hendrix."

/note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV; RNA obtained from human embryonic stem cells isolated from the inner cell mass of blastocyst stage embryos and differentiated to an early neural progenitor cell type. Cell line id and NIH Registry designation is BG01. Positive for Nestin and Musashi expression. Passage number 18. cDNA primed using oligo-dT primer: 5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into the EcoRV/NotI sites of pExpress-1. This primary library is non-normalized (normalized primary library is NIH_MGC_259). It was constructed by Express Genomics (Frederick, MD). Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Note: this is a Mammalian Gene Collection library."

                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured RNA was size fractionated on a 1% agarose
                     gel. First strand cDNA synthesis was primed with oligo-dT
                     primer containing a Not I site. Double strand cDNA was
                     size selected according to mRNA size fraction, ligated
                     with EcoR I adaptor, digested with Not I and then cloned
                     directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA tail
                     is GATAAGGCCA. Tissue was provided by Mary Hendrix."

                     /note="Vector: pT7T3-Pac (Pharmacia) with a modified
                     polylinker; Site_1: EcoR I; Site_2: Not I; NCI_CGAP_Fs1 is
                     a cDNA library containing the following tissue(s):
                     Fibrosarcoma Cell line HT-1088 (ATCC number CCL-121). The
                     library was constructed according to Bonaldo, Lennon and
                     Soares, Genome Research, 6:791-806, 1996. First strand
                     cDNA synthesis was primed with an oligo-dT primer
                     containing a Not I site. Double stranded cDNA was ligated
                     to an EcoR I adaptor, digested with Not I, and cloned
                     directionally into pT7T3-Pac vector. The oligonucleotide
                     used to prime the synthesis of first-strand cDNA contains
                     a library tag sequence that is located between the Not I
                     site and the (dT)18 tail. The sequence tag for this
                     library is GTTCTACGAG.
                     TAG_TISSUE=fibrosarcoma
                     TAG_LIB=UI-H-DP0
                     TAG_SEQ=GTTCTACGAG"

                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured RNA was size fractionated on a 1% agarose
                     gel. First strand cDNA synthesis was primed with oligo-dT
                     primer containing a Not I site. Double strand cDNA was
                     size selected according to mRNA size fraction, ligated
                     with EcoR I adaptor, digested with Not I and then cloned
                     directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA tail
                     is GATAAGGCCA. Tissue was provided by Mary Hendrix."

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:31261618.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF017CA04QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 15, 2001 this sequence version replaced gi:30546021.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DE003DE11QP1&c=6328.r.

                     /clone_lib="NIH_MGC_262"
                     /note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV;
                     RNA obtained from human embryonic stem cells isolated from
                     the inner cell mass of blastocyst stage embryos and
                     differentiated to an early neural progenitor cell type.
                     Cell line id and NIH Registry designation is BG01.
                     Positive for Nestin and Musashi expression. Passage number
                     18. cDNA primed using oligo-dT primer:
                     5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
                     the EcoRV/NotI sites of pExpress-1. This primary library
                     is non-normalized (normalized primary library is
                     NIH_MGC_259). It was constructed by Express Genomics
                     (Frederick, MD). Sequence ends have been trimmed to
                     exclude vector and regions below Phred quality 16. Note:
                     this is a Mammalian Gene Collection library."

/note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV; RNA obtained from human embryonic stem cells isolated from the inner cell mass of blastocyst stage embryos and differentiated to an early neural progenitor cell type. Cell line id and NIH Registry designation is BG01. Positive for Nestin and Musashi expression. Passage number 18. cDNA primed using oligo-dT primer: 5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into the EcoRV/NotI sites of pExpress-1. This primary library is non-normalized (normalized primary library is NIH_MGC_259). It was constructed by Express Genomics (Frederick, MD). Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Note: this is a Mammalian Gene Collection library."

/clone_lib="NIH_MGC_262"
/note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV; RNA obtained from human embryonic stem cells isolated from the inner cell mass of blastocyst stage embryos and differentiated to an early neural progenitor cell type. Cell line id and NIH Registry designation is BG01. Positive for Nestin and Musashi expression. Passage number 18. cDNA primed using oligo-dT primer: 5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into the EcoRV/NotI sites of pExpress-1. This primary library is non-normalized (normalized primary library is NIH_MGC_259). It was constructed by Express Genomics (Frederick, MD). Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Note: this is a Mammalian Gene Collection library."

TITLE Full-length cDNA libraries and normalization
JOURNAL Unpublished (2001)
COMMENT On May 15, 2003 this sequence version replaced gi:30763402.
Contact: Genoscope
Genoscope - Centre National de Sequencage
2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.
This sequence belongs to sequence cluster 6328.r
For more information about this cluster, see
http://www.genoscope.cns.fr/cdna?s=CS0BAK046AB09NM1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On May 15, 2003 this sequence version replaced gi:30781989.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF025BE08QP1&c=6328.r.

                     Site_2: Not I; The library was constructed according
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured RNA was size fractionated on a 1% agarose
                     gel. First strand cDNA synthesis was primed with oligo-dT
                     primer containing a Not I site. Double strand cDNA was
                     size selected according to mRNA size fraction, ligated
                     with EcoR I adaptor, digested with Not I and then cloned
                     directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA tail
                     is GATAAGGCCA. Tissue was provided by Mary Hendrix."

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:30491945.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DA007AA05QP1&c=6328.r.

                     /clone_lib="NIH_MGC_262"
                     /note="Vector: pExpress-1; Site_1: NotI; Site_2: EcoRV;
                     RNA obtained from human embryonic stem cells isolated from
                     the inner cell mass of blastocyst stage embryos and
                     differentiated to an early neural progenitor cell type.
                     Cell line id and NIH Registry designation is BG01.
                     Positive for Nestin and Musashi expression. Passage number
                     18. cDNA primed using oligo-dT primer:
                     5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and cloned into
                     the EcoRV/NotI sites of pExpress-1. This primary library
                     is non-normalized (normalized primary library is
                     NIH_MGC_259). It was constructed by Express Genomics
                     (Frederick, MD). Sequence ends have been trimmed to
                     exclude vector and regions below Phred quality 16. Note:
                     this is a Mammalian Gene Collection library."

/note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; UI-CF-EN1 is a normalized cDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CTGCTCAGGT.

```

1996. Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is GATAAGGCCA. Tissue was provided by Mary Hendrix."
